Powder Coat
Easy to Clean
Finish for
Durability**

**Separate Keys
For Collections
and Pass Key
for
Attendants**

**Larger Capacity
Stainless Steel Coin
Box
with
TriGard Lock**

WHY?

**TODAY IT IS IMPORTANT TO KNOW
WHO IS USING YOUR FACILITIES**

Lurkers and Vandals can make it difficult to keep your facilities clean and fit for the use of your customers.

By installing one of our token operated locks, the patrons must come to you for a token. This will minimize the headaches associated with leaving your restrooms unlocked, and still lets you serve your customers' needs.

Providing for this most basic need promotes customer service, and increases business traffic.

**A TIME TESTED CONCEPT RE-ENGINEERED
FOR THE TWENTY-FIRST CENTURY**

**NOT JUST A "PAY TOILET"
CONTROL IS THE ISSUE!!**

WHY would I want to install a Universal Coin Lock on my restroom?

People are often reluctant to make their restrooms into **PAY TOILETS**. They do not wish to charge their customers to use the facility. But too often they do find it necessary to restrict **WHO** is using the facilities and to have some control on this. So, you needn't think of it as a **PAY TOILET** but more an issue of "**ACCESS CONTROL**"

Consider the following points

CONTROL How often have you gone into your restroom and found a mess left by junkies - - needles, syringes, and other things best left in the hazardous waste bin? These have been found in libraries, department stores, fast food places and others. There is no place 100% safe from this.

CONTROL How about "lurkers"? Keeping the riffraff out can be an important security issue. Unfortunately, in today's world, this can be a great concern.

DID WE MENTION CONTROL? You can still make your facility available to your customers, but let them remain closed to outsiders. **AND** you get face-to-face contact with **WHO** is asking to use your restrooms. **This may help minimize the entry of graffiti artists!**

FOR COINS TOO! In some instances, **TOKENS** may not be practical. In those cases, the use of a coin, usually a quarter, will at least minimize the damage of transients, and will generate some income to offset the cost of providing a restroom. In other cases, it is reasonable to use a **TOKEN** operated lock. You need not charge for the token, but you do get to be face-to-face with the person using the restroom. This can be important for security reasons, or to limit access to your customers only, and restrict outsiders from using the facility. Such an application is great for **Service Stations, Restaurants, Fast Food places, Laundromats, Bus Terminals, etc.**

One important issue to consider! You should check local building codes & with the Board of Health to make certain such devices are allowed. Some local governments have bans on the use of the devices. They cannot be used on any **Federal Property**. Some areas had bans that have been rescinded. We would be happy to sell you our products, but you assume any liability for orders to have them removed if they are in violation of any codes.

HOW IT WORKS

A door closer must be installed on the door for proper operation. Monarch does not provide this part of the installation. Existing passage lock must be removed.

The user inserts a coin or token in the entry slot on the top of the unit, turns the handle and enters. As the door closes, it locks behind the user, and the outside displays "IN USE". No coin/token can be inserted*, and the user is secure in the facility.

When the user exits the facility, the inside door handle is turned, the coin drops into the coin box when the door closes. It will latch, and will show "VACANT" in the window.

The locks are accompanied by a pass key to allow attendants access when necessary. The coin box lock is under a separate key.

* A special version is available that allows multiple users.

General Installation Instructions

Complete instructions and template are included with your order.

This is only a rough guide as to what must be done.

- 1) Attach proper strike (keeper) to door jamb.
- 2) Use template to position the back plate. It is **IMPORTANT** that the gap between the Strike and Lock be kept at the proper spacing yet allow the door to swing away with no interference. The back plate has slotted holes that allows for adjustment.
- 3) Drill $\frac{3}{4}$ " hole for inside handle stem through door.
- 4) Attach the back plate to the door with the screws.
- 5) Attach the escutcheon plate and inside handle. Make sure that it turns freely.
- 6) Attach the coin lock by engaging the top tabs into the slots inside the housing, swinging it down and into place.
- 7) Test lock with appropriate coin or token.

Jammed coins may be usually be cleared by working the pass key a few times. **NOTE**, Smaller coins or tokens may appear in the coin box. This does **NOT** mean they got in. They just lost whatever they have used.

WARRANTY INFORMATION

This product is warranted from manufacturing or material defect for one year from date of original purchase. The warranty does not cover failure due to mis-use, abuse, tampering, or inappropriate application or installation. Warranty does not cover any incidental or collateral damages. Replacement units will be furnished for use while repairs are made to any faulty units. **All units returned for service or replacement must have a Returned Materials Authorization Number. and be returned via UPS to permit tracking of the shipment.** Units sent by mail are not certain to arrive. Monarch assumes no liability for units that are not received in good order.

This coin mechanism has limited sensitivity. No warrant is offered regarding its ability to exclude other coins or tokens. User assumes responsibility for selecting the proper token. **Unaltered units returned for the convenience of the buyer are subject to a 20% restocking fee.** Used or altered units will not be accepted for return. Credit is issued only upon completed inspection of the returned unit.

The Universal Coin Lock complies with pertinent sections of the Americans With Disabilities Act, but full compliance of the facility will be dependent on proper installation to a door that is already in compliance. For Example: application of the UCL to an inswing door with limited turning radius inside would not be ADA compliant. Monarch assumes no liability for the product's use in jurisdictions restricting the use of this or similar products. Check your local building codes.
